Drip irrigation

Specification

1. Drip installation should cover an area of 225m² with a design of hydroponic style
2. Spider emitters each should cover a minimum of 3 plastic plant holders
2. Water should travel a plastic pipe diameter of 20 mm before it is dispersed in a drip irrigation mode
3. The distance between the drippers should not exceed 50cm
4. Pipes should have an underground elevation
6. The drip irrigation should be connected to the main system and be operated separately

Requirements

The company should have at least done a similar job in the past

It must have a special accreditation to handle irrigation equipment by a recognised quality assuring body either Agri-SETA or South African irrigation institute.

The company should have the ability to run a one day irrigation course so as to equip the nursery beneficiaries and must have full capacity to assess them in terms of South Africa Qualifications authority act, 1995.
